What can cause hair loss

- Both men and women experience androgenetic alopecia, or pattern baldness.
- Stress can cause hair follicles to prematurely enter the resting phase and then fall out – a condition called telogen effluvium.
- Vitamin deficiency or changes in hormone levels can lead to thinning hair.
- Other causes include alopecia areata (spot baldness), hair pulling, and excessive hair styling.

EVERY HAIR LOSS JOURNEY IS UNIQUE.

Hair loss – also known as alopecia – affects people of all ages and ethnicities. The onset of hair loss is gradual, with most people starting to notice some level of thinning in their 20s and 30s. It can be caused by hereditary and non-hereditary conditions. We can help you understand what could be causing your hair loss, and recommend a treatment plan based on your diagnosis.

Regardless of your type of hair loss, Bosley has the expertise and experience to provide solutions that are right for you.

VANISHING ACT
SIGNS OF HAIR LOSS

OVERALL THINNING
ACROSS YOUR SCALP, IN YOUR PART OR ON THE CROWN

Both men and women can benefit from non-surgical treatments such as Minoxidil, specialized shampoos and conditioners, and low-level laser therapy, such as the Bosley Revitalizer®. Men can also take finasteride, the generic version of Propecia®, a medication that slows the progression of hair loss. Both oral and topical versions of finasteride are available at BosleyRx.com. While these treatments can be effective in preserving the hair you have, the only permanent solution for restoring your lost hair is surgical hair restoration. Hundreds of thousands of men and women have turned to Bosley for their procedure.

We'll use our expertise to develop a customized treatment plan that incorporates the latest treatments and procedure techniques. Our goal is to help you enjoy a fuller head of your own hair that will last your entire lifetime.

"Since my Bosley restoration, I feel incredibly confident meeting people for the first time, whether it's a business relationship or dating."

Nick H.

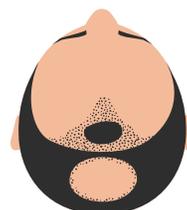

CLUMPS OF HAIR

IN THE SHOWER, ON YOUR BRUSH, COMB OR PILLOWCASE

RECEDING HAIRLINE

ON THE CROWN OR AT YOUR TEMPLES

BALD SPOT

ON THE TOP OR BACK OF YOUR HEAD

IT'S COMMON, BUT NOT ANY LESS FRUSTRATING.

Nearly 40% of men experience some form of hair loss by the age of 35. The most common cause of hair loss in men is androgenetic alopecia, or male pattern baldness, which is characterized by hair that recedes from the sides of the forehead, a thinning crown, or both.

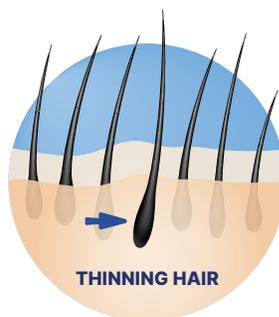

THE HORMONE CONNECTION

This condition occurs due to the hormone dihydrotestosterone, or DHT. It causes hair on top of the head to become finer, thinner and weaker until it stops growing. This process, called miniaturization, progresses over time. Eventually the only area left with hair will be around the sides and back of the head. These follicles aren't affected by DHT, so the hair continues growing for the rest of your life.

SOLUTIONS FOR ANY LEVEL OF HAIR LOSS

In men, hair loss is classified on the Norwood Scale, which helps us determine the best treatment plan for your unique situation.

DHT is a hormone that causes hair follicles to become thinner until they stop growing.

If your hair loss is in the early stages, you may benefit from products and treatments that slow the effects of DHT so you can extend the time you have with your existing hair.

"After my procedure, everything changed in terms of my confidence. It was a freeing experience."

- Edgar S.

If your hair loss is more advanced, or you want a permanent solution, we can develop a plan that includes surgical hair restoration. This uses the healthy hair from the back and sides of your head to fill in thin or bald areas. No matter what goals you have for regaining your hair, we have solutions that can help you achieve the look you want.

Reversing Tension

“My hair started falling out due to tension from braids, weaves and relaxers. It just started coming out, slowly but surely.

I used to find a beautician to come to my home to do my hair so I didn't have to go to a beauty salon and be embarrassed about my hair loss.

The moment I decided to do something was when I just got tired of spending the money every month to get my hair done.

The staff at Bosley was amazing. They made me feel really secure that my hair would grow back. That helped me know that this was the best way to go.”

- Jewel S.

BEFORE

Jewel S.

Individual results may vary.

Hair loss in women is more common than you think.

Nearly half of women in the United States experience some noticeable level of hair loss by age 50. For many women, hair is an important part of their beauty and self-image. However, because women lose their hair differently than men, it can be frustrating to find answers.

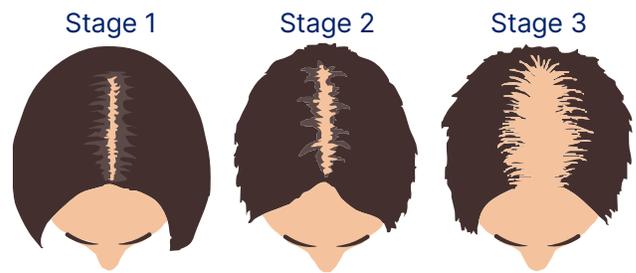

IT'S A DIFFERENT EXPERIENCE

Because society has different expectations of beauty for women, hair loss can be even more devastating. We understand what you're experiencing, and can help guide you through your hair loss journey.

Women generally experience diffused hair loss, or thinning over their entire head. The causes can be more varied than men due to genetics, hormones, stress, age and grooming habits. For women, the Ludwig Scale is the most common way to classify hair loss.

WE HAVE YOUR PERFECT SOLUTION

We'll determine your hair loss pattern, and provide the best solutions to help treat your thinning hair.

THE LUDWIG SCALE IS USED TO CLASSIFY HAIR LOSS IN WOMEN.

If your hair loss is in the early stages, we may recommend specialized shampoo, conditioner, topical treatments, or laser therapy to help slow the progression. Also, we now offer oral minoxidil for women to help treat hair loss through our BosleyRx.com telemedicine platform. We are seeing great result with oral minoxidil to help women grow thicker, fuller hair.

For more advanced thinning or balding, we'll evaluate your hair loss and determine if you're a candidate for a surgical hair restoration plan. It's a permanent solution that can help you say goodbye to wigs and scarves, and hello to a fuller head of hair.

40%

OF WOMEN HAVE VISIBLE
HAIR LOSS BY THE AGE OF 40

Traction alopecia is a common cause of hair loss in women. Hair falls out after the consistent pressure of tight ponytails, pigtailed or braids.

Physicians Dedicated to THE ART AND SCIENCE OF HAIR RESTORATION.®

Our physicians specialize in the art and science of hair restoration, and that's why so many clients choose Bosley. You can feel confident knowing they are members of leading industry organizations, and many are board certified in plastic surgery, general surgery, or dermatology.

Restoration

STARTS WITH A FREE HAIR & SCALP ANALYSIS.

The best first step in your hair restoration journey is to schedule a consultation with one of our trained Bosley Specialists. Your appointment is no-obligation and completely free.

Our consultations give you the opportunity to discuss your hair loss in a confidential setting with our highly skilled professionals who are attentive, knowledgeable and helpful.

You can even bring a family member, spouse or friend to your appointment for added support.

It's your time, so feel free to ask any and all questions you may have about hair loss and the latest solutions available to help restore your hair. We're all about helping you move forward with confidence.

What to expect at your appointment

1. Receive a microscopic hair and scalp analysis.
2. Determine classification and possible reasons for hair loss.
3. Discuss expectations of outcome with and without treatment.
4. View before and after photos from real patients with a similar classification.
5. Explore treatment options to help you reach your restoration goals.
6. Review estimated cost and financing options.
7. Leave with a personalized consultation report.

A plan as unique as you are.

Depending on your personal hair loss and restoration goals, your Bosley physician will let you know if you're a good candidate for surgical hair restoration. You'll also learn which non-surgical treatment options may work to help you achieve the look you want. In addition, your physician can provide information about medical conditions that may affect your hair transplant eligibility. Our goal is to help you understand factors that may affect your treatment outcomes, so you know what to expect.

"My doctors made me feel completely comfortable. They helped me see that my desired result was attainable."

- Johnathin R.

WITH ALL THE SUPPORT YOU NEED

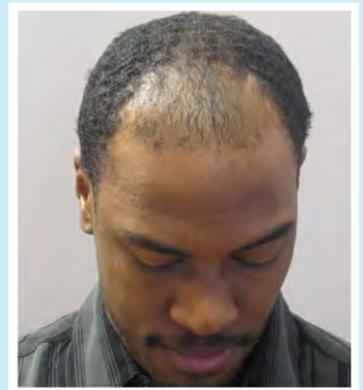

- If your treatment plan includes non-surgical solutions, we'll teach you how to use them effectively to maximize your hair growth potential.
- After surgical hair restoration, you'll receive free checkups to show you how to care for your newly transplanted hair and support the new growth as it comes in.
- We're here to provide the information you need at every stage of your journey.
- We'll work with you at every step to make sure you're happy with the results.
- We're here for you with a network of more than 30 expert physicians in all major cities.

Professional services are provided by the affiliated physicians of the Bosley Medical Group (Bosley physicians). Bosley physicians are available only at Bosley surgical offices.

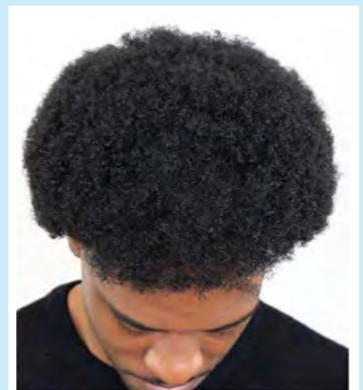

Johnathin's Story

"I felt completely comfortable with the doctors, technology and techniques they use. I would recommend Bosley to anyone."

- Johnathin R.

AFFORDABLE | CONVENIENT | EFFECTIVE

BosleyRx can help you stop hair loss with convenient, FDA-approved treatment options. Get proven prescription-only medication and specially-formulated topicals delivered directly to you, no doctor's office visit required.

Bosley's Personalized Hair Growth Solution for Women combines the powerful benefits of oral minoxidil and spironolactone to help you achieve thicker, healthier hair in as few as 6 months.

WHAT IS FINASTERIDE?

Finasteride (generic for Propecia¹) is an FDA-approved prescription medication that treats male pattern baldness (MPB). The sad fact: 25% of men with MPB start losing hair before age 21. The good news is, Finasteride can pump the brakes on MPB.

THE SCIENCE

By preventing testosterone from converting into DHT (the hormone your follicles dread most) it averts the shrinking that leads to hair fallout. After a few months of regular use, you'll notice thicker hair and reduced hair loss.

CONVENIENCE

BosleyRx is a fast, affordable and convenient way to get prescription hair loss medications shipped to your home without the need of going to a doctor's office.

TREATMENT PLAN OPTIONS

HiGrowth Hair Formula

TOPICAL FINASTERIDE & MINOXIDIL

Our compounded, no-pill, topical finasteride hair growth solution is a blend of clinically proven, FDA approved individual ingredients, finasteride and minoxidil, specifically formulated to help stop hair loss and stimulate hair growth.

Finasteride, 1mg

FINASTERIDE TABLETS

Finasteride is a highly effective, FDA-approved hair loss prevention drug that requires a prescription. For most people it will control male pattern hair loss with regular use, so you may keep what you've got before it's gone.

BosleyRx Oral Minoxidil, 1mg

MINOXIDIL CAPSULES

BosleyRx Oral Minoxidil isn't your run-of-the-mill hair loss treatment found at your local drug store. It utilizes the same well-known, clinically proven, FDA approved ingredient to help combat hair loss – minoxidil, but as a convenient, once-a-day pill.

BOSLEY®

SMP Scalp Micro Pigmentation

A **same-day** solution for the instant look of a fuller head of hair

SAFE.

NATURAL-LOOKING.

NON-SURGICAL.

"I'd recommend Bosley SMP to any man or woman who's ready to make a change to their life and find their confidence again. I would suggest Bosley; this is the place!"

Julien G.

Q&A

What Is Scalp Micro Pigmentation?

Scalp Micro Pigmentation (SMP) is an innovative solution that replicates the appearance of thicker, fuller hair.

Specially trained technicians apply a proprietary formula of pigment (ink) to the scalp with micro-fine needles to create thousands of tiny impressions, giving the illusion of hair, similar to the artist's technique of stippling.

This low cost solution can be used to enhance an existing hair restoration or provide an alternative to individuals who want a non-surgical treatment suitable for all types of hair loss.

What Can SMP Do For You?

THICKEN THE APPEARANCE OF HAIR

Whether you have long hair, short hair, thinning hair or a visible scalp, SMP can provide the appearance of a thicker, fuller head of hair for men and women.

BEFORE

AFTER

ADD DEFINITION TO YOUR HAIRLINE

SMP can provide definition for full front, side and rear hairlines as well as restore a front hairline for full or partially bald heads. For those with a shaved head or no hair at all, the result is the look of a close shave or buzz cut style.

BEFORE

AFTER

Individual results may vary.

Why Bosley SMP?

At Bosley, our skilled technicians are experts in SMP, having been trained by the world's leading scalp micro pigmentation expert. Bosley takes your comfort to the next level by having our physicians administer local anesthesia.

Is it a Tattoo?

Scalp Micro Pigmentation (SMP) is similar to a tattoo, but the needle sizes differ, and lighter impressions are made on the scalp leaving just a small amount of pigment.

Is it Safe? Will it Impact Hair Growth?

It is very safe. Sterile, single-use needles are utilized and discarded after each session. There is no damage caused to hair follicles and your hair growth is not impacted.

Will the Ink Fade?

The sharpness of the impressions will naturally soften over time. Due to the precision of the technique and the ink used, the impressions will not blur together. As each client's scalp and skin are uniquely different, some clients may experience fading or softening over time.

Will I Feel Any Discomfort Post-Treatment?

If present at all, the discomfort is minimal and can be likened to a mild sunburn.

Restore Your Eyebrows.

TRANSFORM HOW YOU LOOK AND FEEL.

Eyebrows are an important feature because they frame your face, allowing others to recognize expressions. Whether your eyebrows are thin or missing due to over grooming, genetics, or an illness, it can take a toll on your self-esteem. Many of our patients came to Bosley because they were unsatisfied with time-consuming makeup or unrealistic tattoos.

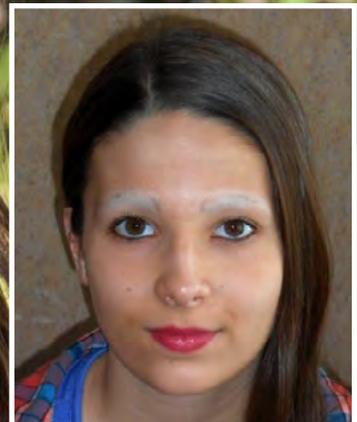

An eyebrow restoration uses the same technique as restoring scalp hair.

To create a natural-looking result, hairs from just above the ear are transplanted into the eyebrow region. Our expert physicians personalize the shape of your new eyebrows to suit your facial features.

From filling in thinning areas to rebuilding completely missing brows, the results can help define your face and highlight your eyes. It's completely permanent, and you can use makeup to enhance your eyebrows, not hide them. And that's a beautiful thing.

From Drawn on to Truly Natural

"I was still in high school when I lost my eyebrows and it was a rough time for me. You're already in high school, so your self-confidence is already pretty low. Losing my eyebrows made it worse. Some days I would stay home because I was embarrassed to go anywhere without eyebrows.

After finding nothing that would work, my mom and I looked up Bosley. I knew about full hair restoration, so when I discovered they do eyebrows, too, I knew it was the perfect solution.

The people at my consultation were so friendly and nice, I didn't feel embarrassed. I felt like they were helping me, and they really were. When I had my procedure, the medical staff made me feel very comfortable.

With my new eyebrows, I feel like a completely new person. Now, I always get compliments. Even people who know I got the restoration say they look so real. My eyebrows were the main source of stress in my life, but now that I've had this procedure done, I'm carefree.

I'm a much more confident person in that I can do anything now – swimming, sleepovers, work out – without worrying about them fading away. The Bosley eyebrow restoration was so worth it."

"Bosley made me feel pretty. I feel like a real woman again because I have my eyebrows back."

- Kristin M.

Amier Q.

We've Perfected The Art OF NATURAL, REALISTIC, PERMANENT HAIR RESTORATION.

Over the past 50 years, we've performed hundreds of thousands of surgical hair transplantation procedures. During that time, with unparalleled experience, we've turned hair restoration into an art form.

That's the Bosley difference. We create results that look so good, it's almost impossible to tell you had a restoration. It's your own hair, so you can cut, style and wash it.

We carefully create or recreate your hairline to ensure it's exactly the look you want.

THE SCIENCE OF DONOR DOMINANCE

Dihydrotestosterone, or DHT, is a hormone that makes certain hair follicles shrink until they no longer grow. That's why men with advanced balding often only have hair around the sides and back of their head. These hair follicles are resistant to DHT, so they continue to grow even if you've lost the hair on top of your head.

In surgical hair restoration, we use these DHT-resistant hair follicles to fill in thinning or bald areas. Donor dominance allows transplanted follicles to continue being DHT resistant, which is what makes a surgical hair restoration permanent.

THE GOLD STANDARD: MINIMALLY INVASIVE WITH MAXIMUM RESULTS

We perform your surgical hair restoration under local anesthesia using precise tools. You'll be awake and comfortable while we work.

During the procedure, we select grafts from the back of your head, or the donor area. The grafts are carefully separated into follicle groups of one to four hairs, which are then prepped and transplanted into the thinning or balding areas on your scalp.

Fine, thin hairs are placed in the front to create a natural-looking hairline, while thicker hairs are placed farther back to add volume. We pay special attention to the location, angle and depth of each follicle group. That's how we make your restored hair blend in, so you can stand out.

Science makes hair restoration permanent.
Artistry makes hair restoration undetectable.

Restoration Story

"My Bosley physician was outstanding. I was looking for a certain look and he actually listened to me. When I went for my initial consultation, my doctor drew the hairline, and redrew it until I got the hairline I was looking for.

It's such a gradual process of the hair coming in over twelve months. I was starting to look younger. I'm 54 and people think I'm in my 40s again because I got my hair back."

- Amier Q.

BEFORE

AFTER Individual results may vary.

It Takes Less Than One Day TO START YOUR NEW LIFE WITH HAIR.

When you arrive for your surgical hair restoration procedure, you'll receive personalized attention from start to finish. The entire process typically takes about four to six hours. Here's what you'll experience before, during and after your appointment.

AN EASY OUTPATIENT EXPERIENCE

During your procedure, you'll be able to read or watch a movie. We'll provide you with light food and drinks to make sure you're completely comfortable. After the procedure, we may prescribe pain medication for you to take at home. However, many patients don't need it.

We recommend taking off a full day from work on the day of your procedure, so you can recover comfortably at home.

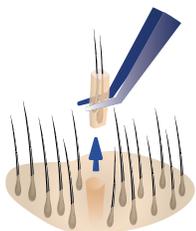

STARTING YOUR NEW LIFE WITH HAIR

The next day, we'll ask you to return so we can show you how to wash your scalp and care for the recipient area to ensure maximum hair growth. It's important to keep in mind that you may see some shedding in the months following your procedure. That's completely normal. The transplanted follicles may shed the existing hair shaft, after which new hair will begin to grow.

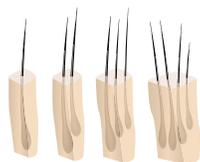

THE HAIR FOLLICLE

IT'S IMPORTANCE AND WHY IT SHOULD BE TREATED LIKE GOLD

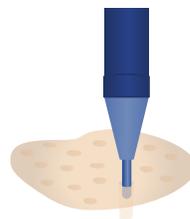

Hair follicles contain nerve fibers and blood vessels in addition to the root and glands. Most hair follicles are grouped into clusters of one to four hairs that share a common blood supply and nerve endings. During surgical hair restoration, we pay careful attention to keep each follicular unit intact to help ensure the transplanted hair receives proper nutrients and has the best chance to grow.

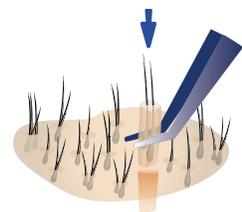

HAIR FOLLICLES
are harvested from the donor area

TECHNICIANS
carefully separate and prepare follicles

PRECISE INCISIONS
are made in needed area(s) to prepare for follicles

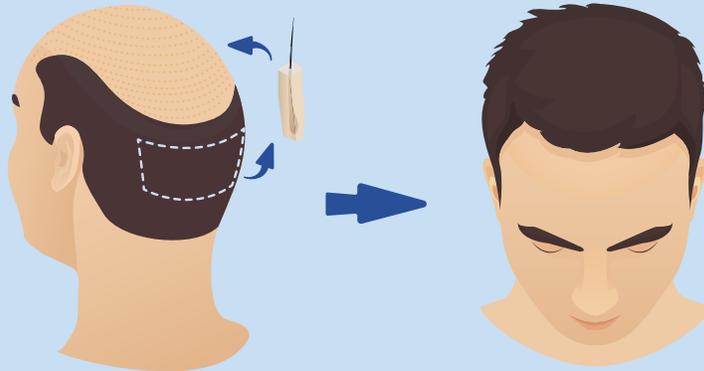

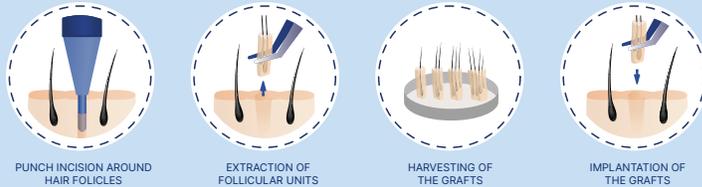

YOUR EXPERT CARE TEAM
places your own follicles in natural hair growth pattern

You Have Choices

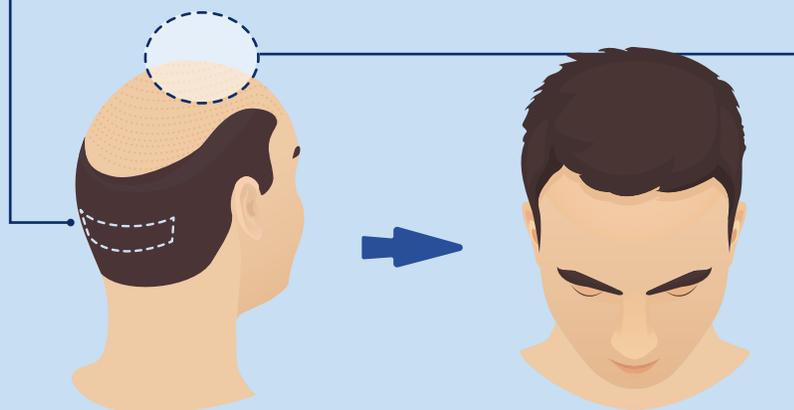

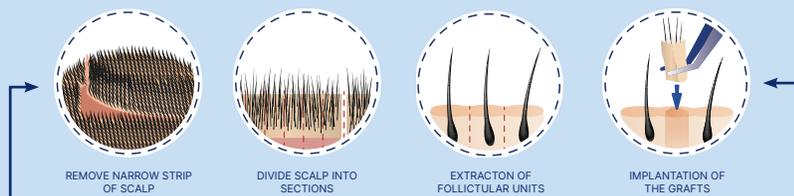

There are two methods for harvesting hair from the donor area. Each has its own, wonderful benefits, so the choice comes down to your personal preference to achieve your desired look.

FOLLICULAR UNIT EXTRACTION (FUE)

Hair follicles are extracted using a one-millimeter or smaller instrument. This allows us to isolate individual healthy hairs in small groupings, with no need for a linear scar or stitches. The donor area heals completely after a few days, and the donor area is nearly imperceptible.

FOLLICULAR UNIT TRANSPLANTATION (FUT)

A narrow strip of skin is removed from the back of your head, which allows us to harvest the maximum number of follicles for your restoration. Our skilled technicians separate your grafts into follicular units so they're ready to be placed. While this method does leave a thin linear scar, your normal-length hair will cover it so it's hardly noticeable.

Drequan R.

A N INVESTMENT IN YOUR HAPPINESS.

Americans are estimated to spend about \$1 billion per year on hair growth treatments. With our decades of experience, we can confidently recommend treatment solutions that actually get results. If you choose surgical hair restoration, it's important to understand the value you receive in relation to the cost. Because it's the only permanent hair loss solution, you can think of hair restoration as a lifetime investment in yourself.

PREDICTABLE PRICING SO YOU KNOW WHAT TO EXPECT

A Bosley surgical hair restoration typically costs between \$4,000 and \$10,000. This is based on the cost per graft, with the typical procedure requiring between 1,000 to 3,000 grafts for most patients. However, the more hair you choose to have transplanted, the lower the final cost per graft. For example, 1,200 grafts won't cost twice as much as 600 grafts. We'll help you determine the number of grafts you need to achieve your desired look, while keeping your budget in mind.

The number of grafts you need depends on your goals, hair texture and color. The amount of donor hair available will also play a role in the quantity available for transplantation. You may choose to have multiple procedures to achieve the fullness, density and hairline you want.

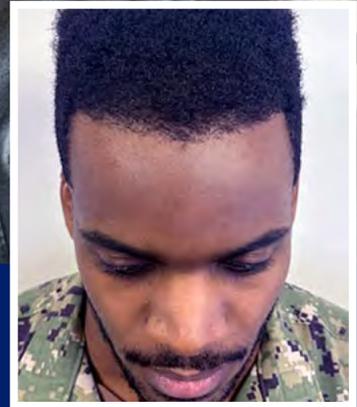

WE KNOW THE IMPORTANCE SO WE MAKE IT AFFORDABLE FOR ANY BUDGET

To help make your hair restoration more affordable, we offer the best interest free financing options of any practice through our third-party financing partners. Bosley is not affiliated with these lenders, doesn't make recommendations for or against credit for our patients, and we don't receive remuneration for patients who apply and qualify for financing. This means you can independently choose the financing that's right for you. Ask your Bosley Specialist about the financing options available to help you reach your hair restoration goals.

Change Your Life

BEFORE

AFTER Individual results may vary.

"The payment plan offered at Bosley made my procedure extremely affordable and realistic. It would've been difficult to pay all that money at once, but the payment plan was awesome. They have people there to help you. It made hair restoration a possibility for me."

- Drequan R.

Jeff's STORY

Jeff B.

Individual results may vary.

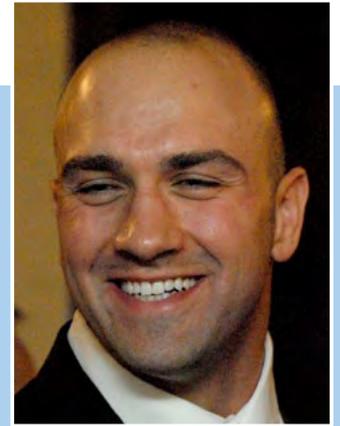

"I walk into a room with confidence because I feel like I have my youthful hairline back."

- Jeff B.

AFTER SEEING HIS HAIRLINE RESTORED, JEFF FEELS LIKE A WHOLE NEW MAN.

From Green Beret to firefighter to actor, Jeff learned throughout his career that confidence is the key to success in any role. When he started noticing his hair loss impacting his self esteem, he knew he had to do something about it. As someone comfortable with identifying problems and finding solutions, Jeff turned to Bosley for his hair restoration procedure. Now, Jeff doesn't shy away from cameras – and he doesn't shave his head unless he's acting in a part that requires it.

BEFORE

Life Changed by Bosley

"I have a background in fitness, where putting in time at the gym and eating a certain way would yield the desired outcome.

When I started losing my hair, it was a foreign concept to me to not be able to control something I wanted.

As my hair started getting thinner, I tried to hide it by combing it over. Then I shaved it for a long time.

I got tired of being so self-conscious of my hair that I decided it was time to do something about it.

Now that I have my hairline back thanks to Bosley, I'm not constantly focusing on my hair. I'm happy to take pictures and just enjoy the life I'm living."

Class 3

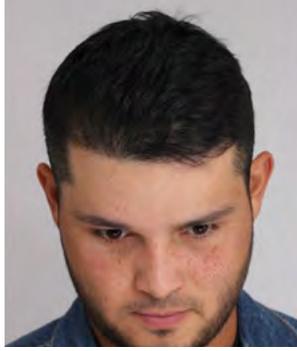

“I was just not happy with the way I looked. I just knew I had to do something before it got worse. I went to Bosley and out 100% trust in them to get me back to where I was and where I wanted to be again. Honestly, from start to finish it was great. I couldn’t be happier with the decision I made. It works, it works for me.”

Eyebrows

"It used to take me 15-20 minutes to do my eyebrows each day. I used to worry about sweating or swimming and my drawn-on eyebrows rubbing off. Since my eyebrow restoration at Bosley, I feel like my face is complete. I can just get up and go. I hold my chin up and look people in the eye because I feel good about my eyebrows now."

All The Answers You Need

WHEN IS THE BEST TIME TO LOOK INTO HAIR RESTORATION OPTIONS IF I NOTICE HAIR LOSS?

Right away. Hair loss is progressive so once you start to notice it, you should take control of your hair loss and start investigating options. The sooner you take action, the greater the chance you can do something out it.

WHY CHOOSE BOSLEY?

Experience matters. That's why you want to choose a dedicated hair restoration doctor. We're here to help you choose the treatment plan that will help you achieve the look you want. Come for a free hair and scalp analysis and get a great starting point for your hair restoration. The only cost to you is your time. Think of it as an investment in yourself with help from the world's most experienced hair restoration experts – who have more than 50 years of experience and 500,000+ procedures performed.

WHAT IS THE BOSLEY GUARANTEE?

For all hair transplantation procedures performed by Bosley physicians, we agree to replace any non-growing hair transplant grafts free of charge, providing the patient has adequate donor hair and meets the terms and conditions below.

WILL A HAIR TRANSPLANT PROCEDURE HURT?

Patients are administered local anesthesia to completely numb the donor and recipient areas. However, the degree of pain or discomfort experienced during or after the procedure varies according to the patient. We may supply patients with medication to use after the procedure, if needed.

Many of our patients find that they do not need to take any medication at all after their hair transplant procedure and are back to work the next day!

HOW LONG DO HAIR TRANSPLANTS LAST?

For the vast majority of patients, virtually all transplanted hair lasts a lifetime.

ARE THERE ANY COMPLICATIONS OR RISKS WITH HAIR TRANSPLANTATION SURGERY?

Infections after a hair transplant procedure are rare. In the few cases where infection does occur, it is often due to the patient's failure to fully follow post-operative instructions. However, infections are generally easy to treat with antibiotics, which can be prescribed by your physician.

HOW MUCH DOES BOSLEY HAIR RESTORATION COST?

Only our physicians can determine if you're a candidate for surgical hair transplantation and provide an estimate of the final cost in your individual care. When you meet with one of our specialists for a free hair and scalp analysis, they can provide you with valuable information to help you determine the typical cost for a procedure that meets your needs.

In general, most of our patients invest anywhere between \$4,000 – \$10,000 per procedure before any available discounts. You can read more about the Bosley procedure and hair transplant procedure costs at bosley.com.

John W.

John's Story

"When a man experiences hair loss, it is a painful thing because you know that hair is not coming back. I started looking for ways to stop the hair loss. So I discovered Bosley. It was a great experience. I feel like Bosley has given me a youthful appearance. You'll never regret going to Bosley but you may regret not."

- John W.

Important Information

HAIR LOSS AND YOUR GOALS

The treatment options (if any) recommended at the initial physician consultation for the correction of hair loss vary from patient to patient and depend upon the level of hair loss, the texture of donor hair and other factors, including the patient's personal goals. The treatment options (if any) recommended by your Bosley physician are the physician's recommendations at the time of the consultation consistent with your current level of hair loss, your hair texture and your current goals for improvement.

CONSULTATIONS

Every patient who has any surgical procedure at Bosley has a prior consultation with a Bosley physician. Specialists and other persons who consult with you about hair restoration procedures prior to your consultation with a licensed physician may disseminate only general information about hair restoration procedures. Since Bosley's Specialists are not physicians, they are prohibited by law from examining, diagnosing, treating, operating for or prescribing for any physical condition.

PHYSICIAN'S CURRENT RECOMMENDATIONS

At the completion of your initial consultation with a Bosley physician, you will be given written statement(s) which will include Bosley's current fee schedule for all procedures and the physician's current recommendations. Those statements will include the number of grafts (if any) currently recommended by the physician and any other treatment currently recommended by the physician. In our experience, using the best current techniques, the great majority of our patients want to have at least two procedures to a given area. The physician's current recommendations could change in the future as determined by the physician. The patient's choices will affect the costs incurred as well as the results the patient is able to achieve.

THE BOSLEY GUARANTEE

For all hair transplantation procedures performed by Bosley physicians, we guarantee to replace any non-growing hair transplant graft free-of-charge, providing the patient has adequate donor hair and meets the terms and condition in the below link: In our experience, such replacement has seldom been necessary.

Professional services provided by the affiliated physicians of the Bosley Medical Group ("Bosley physicians"). Candidacy for hair or eyebrow restoration can only be determined by a Bosley physician upon examination, diagnosis and prescription of a treatment plan. Your Bosley physician will determine if you are a candidate for hair or eyebrow restoration and will recommend the optimal number of grafts to achieve your individual hair or eyebrow restoration goals. A patient may require more than one procedure to achieve their desired results. The statements and images do not constitute a warranty or prediction of the outcome of your individual hair or eyebrow restoration. Not all patients can achieve the results depicted here. Individual results may vary. Ask your Bosley physician about your individual case. Depicted results may be enhanced by the use of professional photo lighting and makeup. Patients depicted may have had more than one hair restoration procedure. Some patients depicted are current or former employees of Bosley.
